

LIOVITAL *Plus*

Ginseng dry extract
Guarana dry extract
Freeze-dried royal jelly

with fructose

10 single-dose microvials of 10 ml with reservoir cap *for oral use*

Ingredients: **Content of the reservoir cap:** maltodextrin; Freeze-dried royal jelly; anti-caking agents: silicon dioxide and magnesium oxide; bulking agents: microcrystalline cellulose.

Microvial content: water; fructose; Ginseng (*Panax ginseng* C.A. Mey.) root titrated dry extract 10% in saponins expressed as ginsenoside Rg1 (ginseng, maltodextrin); acidity regulator: sodium lactate solution 60%; preservative: potassium sorbate; orange flavour; Guarana (*Paullinia cupana* Kunth) seed titrated dry extract 10% in caffeine (guarana, maltodextrin); acidity regulator: citric acid.

Packaging and contents: box containing 10 single-dose microvials in PET (amber colour), of 10 ml each, with reservoir cap.

Category: Food supplement.

Indications: LIOVITAL *Plus* contains titrated extracts of Ginseng and Guarana which respectively promote the metabolism of carbohydrates and lipids and help the organism in case of physical and mental fatigue thanks to their respective adaptogenic and tonic properties, associated with freeze-dried royal jelly.

Recommended dose: 1 or 2 microvials per day, as needed. To be taken the morning fasting. The suspension may be diluted in any non-alcoholic liquid, at a temperature not exceeding 40 °C.

Warnings: Contains caffeine. Not recommended for children and during pregnancy and lactation. Do not exceed the recommended daily dose. Food supplements are not intended as a substitute for a balanced and varied diet and a healthy lifestyle. Keep out the reach of children under three years.

Storage conditions: store at room temperature (15-30 °C) and do not expose to localized heat sources. The expiry date refers to the product properly stored in unopened package.

Notice: being royal jelly a non-soluble colloidal substance, the reconstituted microvial looks like a lactescent suspension.

Instructions for use:

- 1) Screw completely the cap until the breaking of the seal, so the powder in the capsule will fall into the microvial.
- 2) Shake well before use.
- 3) Unscrew the cap.
- 4) Take orally according to instructions.

The persistence, after shaking step, of undissolved particles is an integral part of the product characteristics and should not be understood as a sign of alteration.

Produced and packaged: see external packaging.
